

NPOL report for Tuesday, 28 May 2013

Submitted by tjlang on Tue, 2013-05-28 10:20

Date:

Tuesday, May 28, 2013 - 10:15

Instrument List:

- [Green](#)

Discussion:

NPOL is green and obtained a mix of scans over the disdrometer radials as well as over the Turkey/Upper Cedar basins overnight, as a significant MCS moved SW to NE through our domain. Maintenance on the cooling system for the motors was performed yesterday, and we feel more confident about operating in high winds (~40 mph) without problems, so this will be tested if the opportunity arises. Science staffing has experienced a full reboot with Timothy Lang on the day shift and Brenda Dolan handling the night shift, starting today.
